PINTAR

Learning, evidence, and decisions that stay human.

A presentation for management and educators

Do we really know what is happening inside the learning process?

Not how much was completed. What was actually understood.

The problem is not a lack of data.

Schools already record a great deal. What goes missing is the context that makes those records readable.

WORK IS ASSIGNED → **IT IS COMPLETED** → **A SCORE APPEARS** → **A REPORT IS FILED**

What remains: a number. What is lost: what was understood, what was not, and whether there is enough evidence to conclude anything.

PINTAR helps us understand what is happening in the learning process — based on the available evidence — so people can make better decisions.

The same four questions, for everyone: What is happening? · What does the evidence support? · What should I look at next? · What can I do?

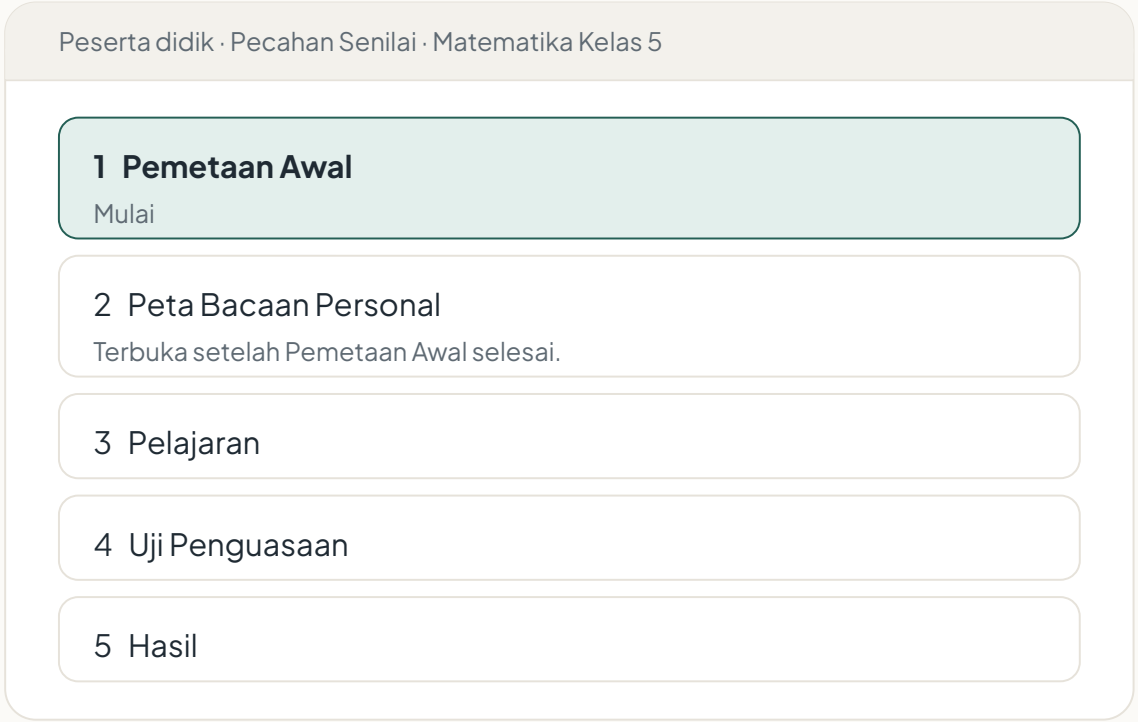

Better information makes human decisions better.

PINTAR does not take the decision over. It makes the decision clearer.

PINTAR should make the human better informed, not make the human unnecessary.

What do I need to do now?

One screen, one question. The order is already set.

THE ORDER IS ALREADY SET

The learner never has to decide where to begin.

WHAT IS NOT OPEN YET EXPLAINS ITSELF

Not merely locked — the screen names what will open it.

NO SYSTEM VOCABULARY

No status, mode or version number reaches a learner's screen.

Layout reconstructed from the built PINTAR interface. The on-screen wording is the product's own. The interface is shown in Indonesian, the product's own language.

The learning cycle, in five steps

PEMETAAN AWAL
Initial Mapping

Where should learning begin?

→

PETA BACAAN
Reading Map

What should be read first?

→

PELAJARAN
Lessons

Learn through the assigned material.

→

UJI PENGUASAAN
Mastery Check

What can now be demonstrated?

→

HASIL
Results

What does the evidence support?

> Initial Mapping and the Mastery Check never use the same questions, and never use their twins either.

Initial Mapping is not an exam.

No score, no pass or fail. The answers are used to build a reading order.

NO VERDICT

An answer that is not yet right is read as a way of thinking, not as a deficiency.

NO COMPARISON

PINTAR compares a person with their own earlier self, never with a classmate.

PROGRESS AS DOTS

No percentage and no countdown on this screen.

Layout reconstructed from the built PINTAR interface. The on-screen wording is the product's own. The interface is shown in Indonesian, the product's own language.

The Reading Map: an order, not a ranking.

One card per competency area, already ordered, each pointing to its reading and its reason.

NOT A RESULTS PAGE

No score, no percentage, no tally of what is not yet right.

ALWAYS A NEXT STEP

Every card names its reading and its reason in plain language.

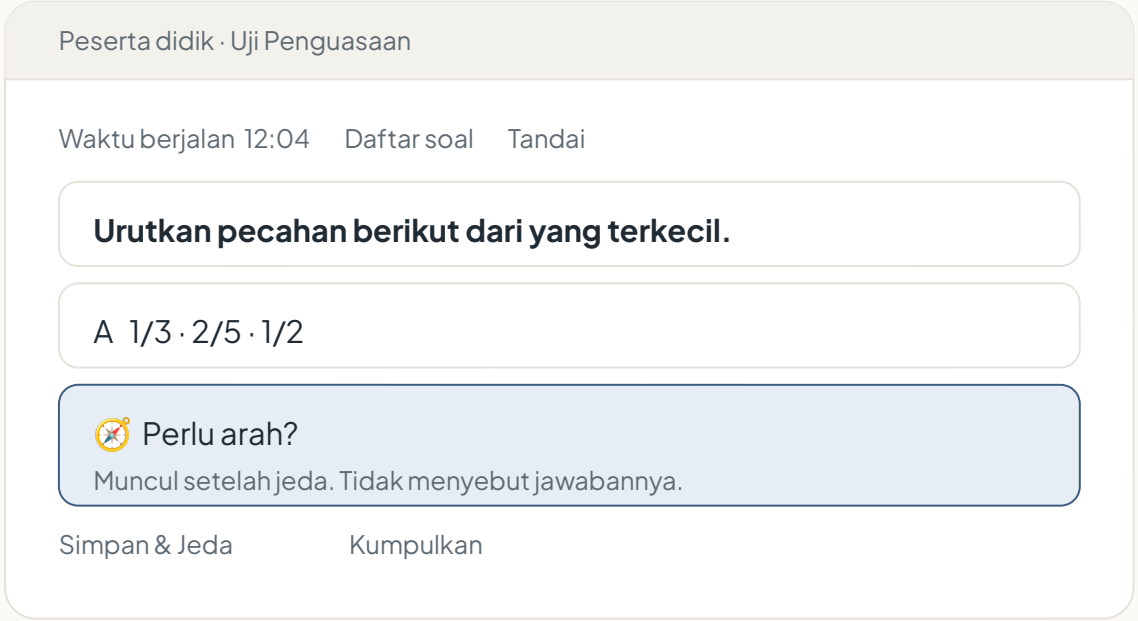

STRENGTH IS NAMED TOO

The learner also learns what does not need repeating.

Layout reconstructed from the built PINTAR interface. The on-screen wording is the product's own. The interface is shown in Indonesian, the product's own language.

The Mastery Check: calm, and revisitable.

Time counts up, not down. A question can be flagged, left, and returned to.

HELP THAT NEVER UNLOCKS THE ANSWER

A hint may never name or narrow to the correct option. The database enforces that rule; it is not an authoring habit.

ASKING FOR HELP NEVER COSTS A MARK

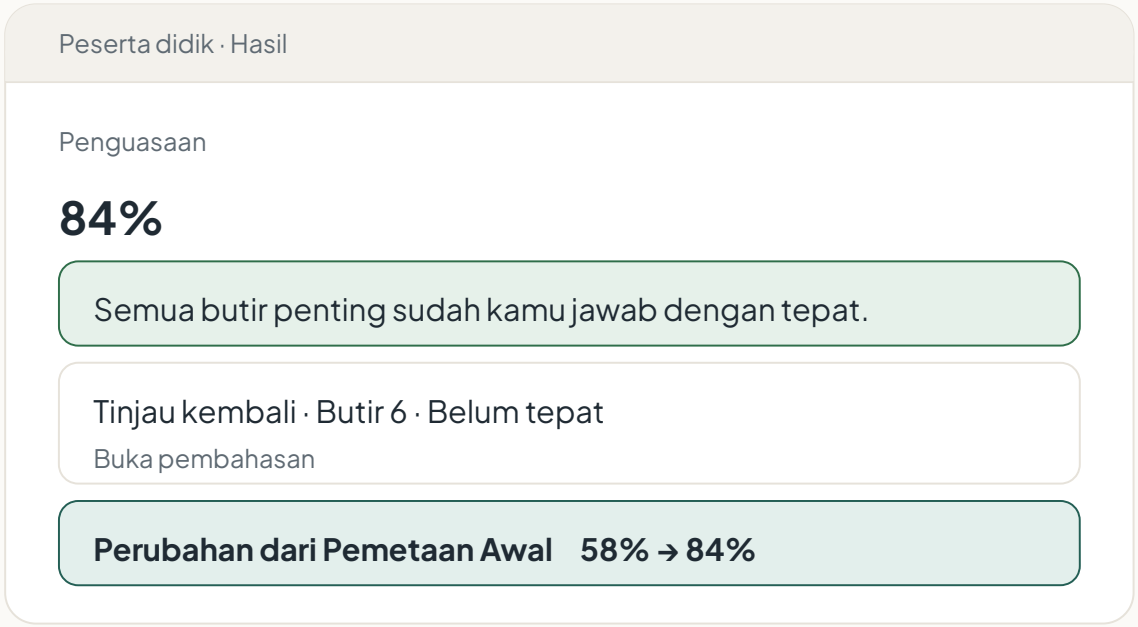

Timing and assistance records never enter the score calculation.

WORK IS NOT LOST

If the connection drops, answers are held and re-sent on reconnection — without duplicating.

Layout reconstructed from the built PINTAR interface. The on-screen wording is the product's own. The interface is shown in Indonesian, the product's own language.

Results: what is mastered, and what still needs attention.

COMPARED ONLY WITH THEMSELVES

The change since Initial Mapping, not a rank in the class.

NO FALSE COMPARISON

If one of the two steps was not taken, PINTAR says so — it does not display a difference of zero.

SAFETY-CRITICAL ITEMS

Where safety-critical content applies, one such item not yet right means mastery is not reached — whatever the score.

Layout reconstructed from the built PINTAR interface. The on-screen wording is the product's own. The interface is shown in Indonesian, the product's own language.

What is most worth doing first?

The educator's home is not a dashboard of everything. What needs nothing does not appear at all.

A ZERO CARD DOES NOT RENDER

The emptiness is in the data, not hidden by the layout.

CLASSES IN YOUR TEACHING CONTEXT

Not 'every class you can see' — the classes you actually teach.

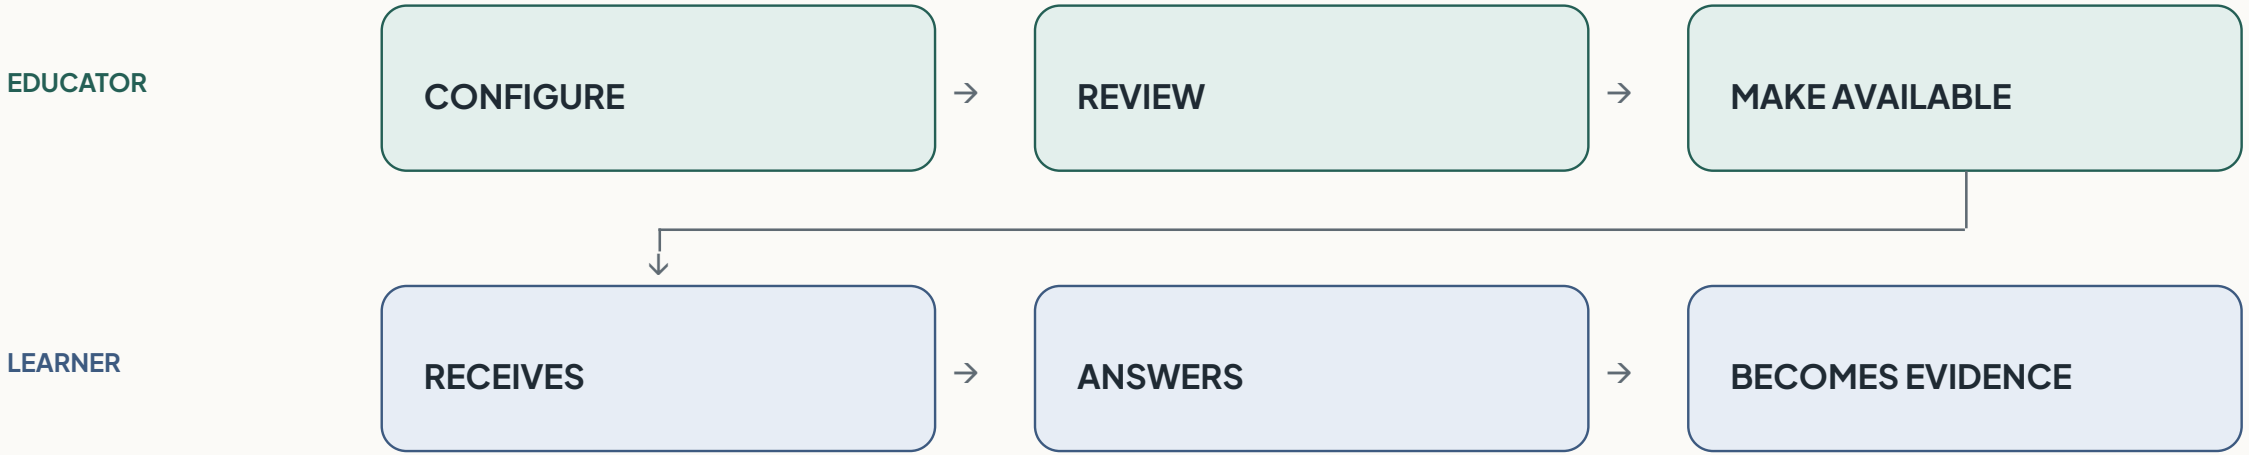

PINTAR PROPOSES, THE EDUCATOR DECIDES

Every card is an offer of work, never an instruction.

Layout reconstructed from the built PINTAR interface. The on-screen wording is the product's own. The interface is shown in Indonesian, the product's own language.

Quick Assessment: from intent to classroom, in about a minute.

Pick the class and the chapter just taught, then open it. No request to an administrator, no technical help.

A Quick Assessment can contribute learning evidence. A single one does not by itself issue a certificate.

Preparing learning: looking is not committing.

PREPARE
PINTAR recognises each file's role and asks about what is not certain.

→

REVIEW
An author never reviews their own work.

→

LOCK
Once locked, the content cannot change.

→

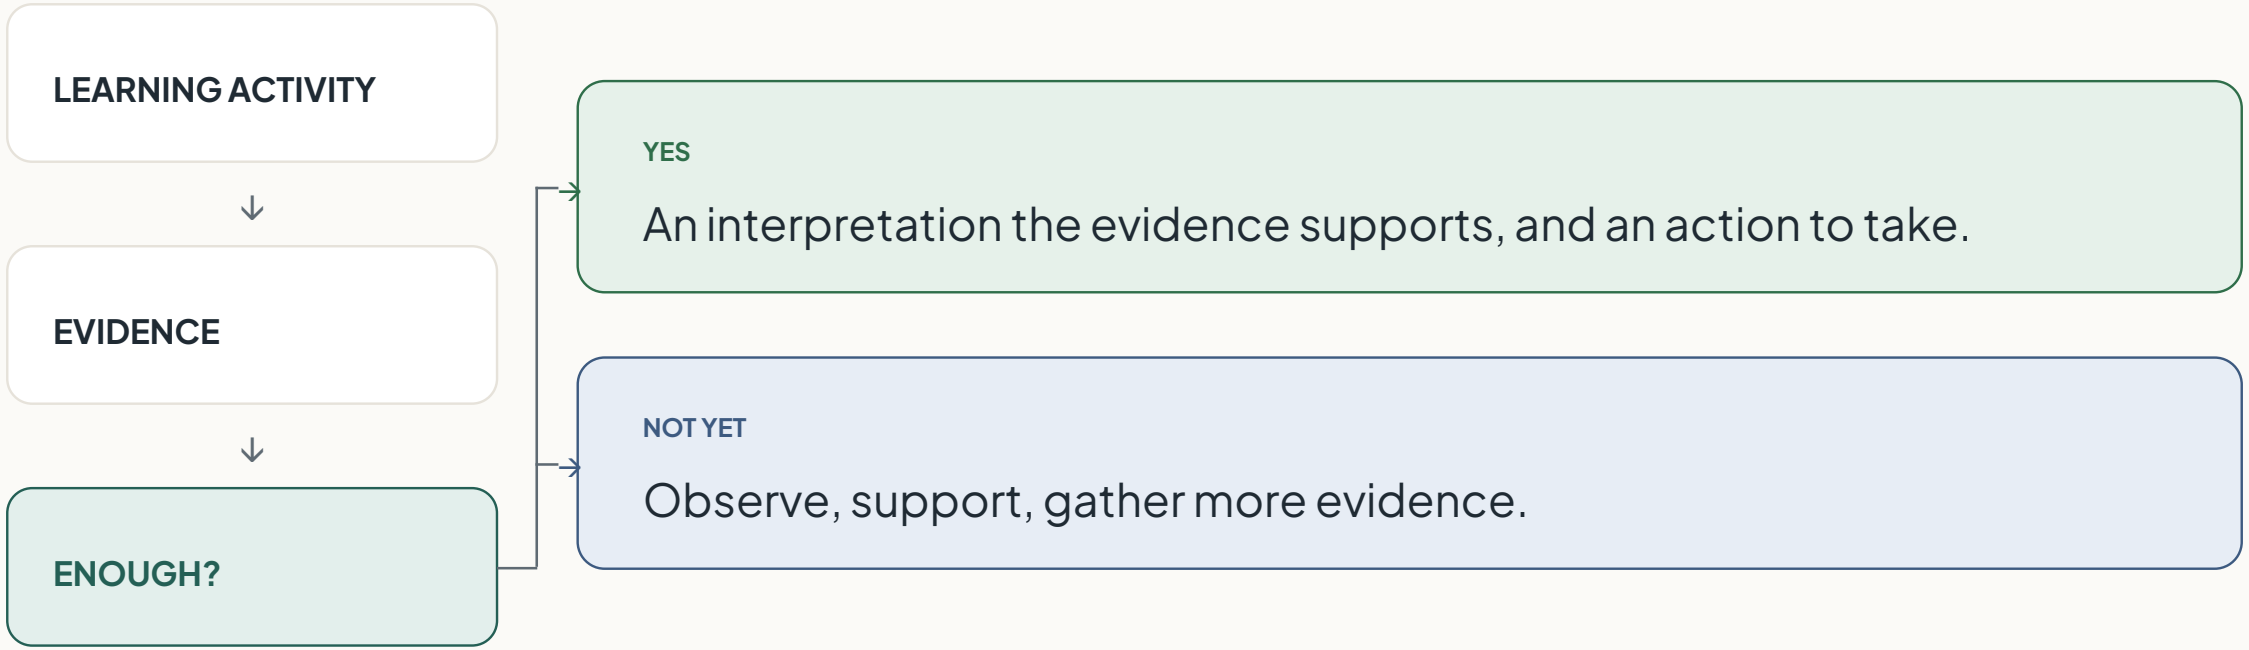

PUBLISH
Available to the school.

→

ASSIGN
Only here does a learner see it.

> Publishing is not yet assigning. The next correction is made as a new copy — the original stays intact, with every record of the learners' work.

The question asked first, every time: is there enough evidence?

Not every activity becomes a conclusion, and no conclusion is forced.

“Not yet enough evidence” is not “not good enough”.

NOT YET ENOUGH EVIDENCE

We do not know yet.

- Not a judgment about the person.
- A valid, honest state.
- It changes as evidence arrives.

NOT YET MEETING THE STANDARD

A conclusion the evidence supports.

- The evidence is sufficient.
- There is a clear next step.
- Still “not yet”, never “no”.

Inside the product: “Belum cukup bukti untuk menilai soal ini.”

NOT YET ≠ NO

Observation is not judgment.

WHAT IS RECORDED

Session activity, proportionately.

- Movement between questions and pages.
- A connection dropping and returning.
- Changes of answer, and submission times.

WHAT IS NOT DONE

No surveillance of a private space.

- No webcam, microphone, screen recording.
- No keystroke logging.
- No machine-decided verdict.

> “During the assessment, certain session activity may be recorded to support process integrity. These records are observations and do not automatically determine your result.”

A number never stands alone.

Take a question's difficulty: PINTAR keeps two different numbers, and never merges them.

THE AUTHOR'S PREDICTION

Before anyone has answered.

The difficulty expected when the question was written.

FROM LEARNERS' WORK

After legitimate evidence exists.

The difficulty actually seen in official work.

NOT YET ENOUGH EVIDENCE

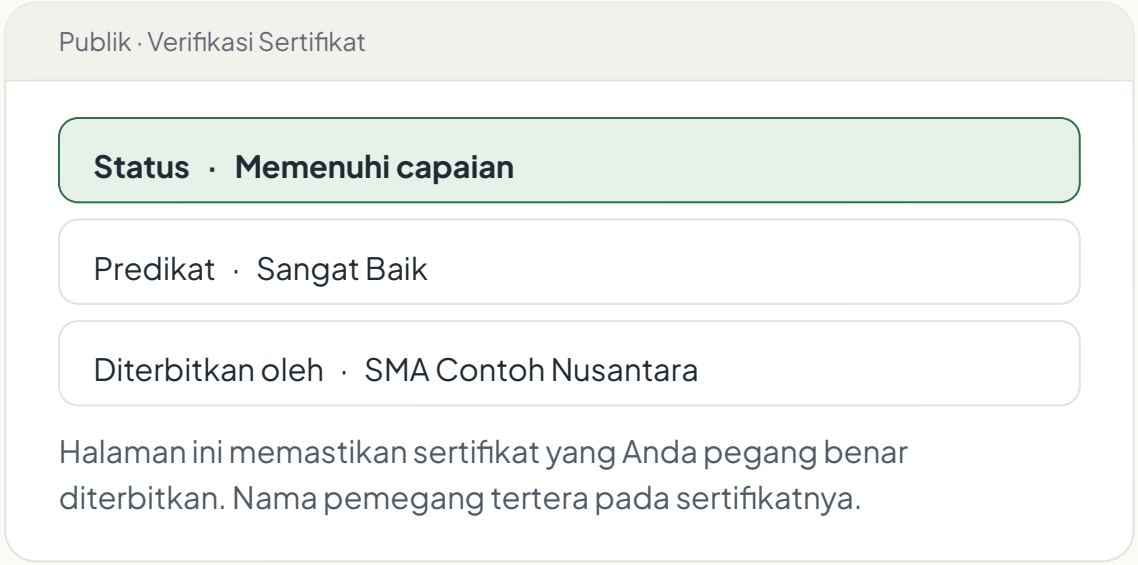

While the evidence is insufficient.

The field is left empty, not given a placeholder.

Evidence from demonstrations, previews or testing never reaches an official number, a report, or a certificate.

A certificate anyone can check.

A certificate issued by the school can be verified at one official address, with no login.

ONLY WHAT IS NEEDED

The public page shows no score internals and no personal data.

BOUND TO THE CONTENT THAT WAS TAUGHT

The certificate names the exact version of the material. Altering any field it attests to makes verification fail.

ONE VERIFICATION ROUTE

There is exactly one official address, and older certificates stay checkable after a key rotation.

Layout reconstructed from the built PINTAR interface. The on-screen wording is the product's own. The interface is shown in Indonesian, the product's own language.

First-login introduction: the seven things this person uses most.

Seven short steps, matched to the role, replayable at any time from Help.

1. WHERE AM I
2. WHAT NEEDS DOING
3. OPENING MATERIAL
4. TAKING AN ASSESSMENT
5. READING THE RESULT
6. CERTIFICATES
7. HELP

> The seven things this person will use most — not the seven things we would most like to show.

Approved experience design. Not a running screen in the version this document reviews.

See it yourself, from five perspectives.

One demonstration school, one and the same learning journey, seen in turn from five roles.

MURID

What do I need to do?

GURU

What is worth doing first?

PENELAAH & PENERBIT

Is this material ready?

PIMPINAN SEKOLAH

What is visible at school level?

ADMINISTRATOR SEKOLAH

Who may do what?

Switching perspective is recorded: not only whose authority was used, but also who used it.

What educators and management will see next.

This section is design, not a running screen.

CLASS PROGRESS

What the evidence supports — and where it is not yet enough.

A READABLE BRIEFING

The finding, who it affects, the suggested action.

THE INSTITUTIONAL VIEW

Patterns across classes, every number meaning the same thing school-wide.

What a measure means is defined by PINTAR, not redefined school by school. A school chooses what is shown and how.

Experience direction. Not built in the version this document reviews.

AI helps interpret. People still decide.

EVIDENCE
What actually happened.

→

PATTERN
What recurs.

→

INTERPRETATION
What it might mean.

→

ACTION
What could be done next.

→

HUMAN DECISION
This one is never replaced.

> Every suggestion must survive one question: why? PINTAR must be able to show the evidence it used, how it read that evidence, and what remains uncertain.

AI proposes. PINTAR validates. Humans govern. No AI can publish content or assign it to learners, and learner-facing help is produced with no access to answer keys.

What changes

THE LEARNER

Knows what to do now.

Sees their own progress, not a rank.

Never meets a dead end.

THE EDUCATOR

Knows what is most worth doing first.

Opens an assessment unaided, in minutes.

Receives evidence to interpret, not a verdict.

MANAGEMENT

One picture, every number meaning the same thing.

Knows where attention is needed, and where evidence is not yet enough.

Responsibility stays with people.

PINTAR does not automate the educator. It removes unnecessary workload, so an educator's time goes back to what only a person can do.

Technology helps us see more clearly. The decision remains ours.

Calm on the surface. Rigorous underneath.

PINTAR terminology

Pemetaan Awal
Initial Mapping

Finding where learning should begin. Not an exam.

Peta Bacaan
Reading Map

A reading order built for one person.

Pelajaran
Lessons

The material itself, with staged worked examples.

Uji Penguasaan
Mastery Check

The assessment after learning. Time counts up.

Hasil
Results

What the evidence supports, compared with oneself.

Uji Cepat
Quick Assessment

A short assessment an educator opens for their class.

Sertifikat
Certificates

Completion evidence anyone can verify publicly.

Bantuan
Help

Guidance openable at any time.

Belum cukup bukti
Not yet enough evidence

A valid state: no sufficient basis to conclude yet.

> The older wordings “Kuis Cepat” and “Mastery Test” are no longer used in presentation language.

How PINTAR keeps its information reliable

Six things the system enforces itself, not by working habit.

1. Answer keys never reach a learner's device.
2. A hint naming or narrowing to the answer is rejected.
3. Scores are computed on the server, then recomputed at issuance.
4. Once material is locked, a correction becomes a new copy.
5. Demonstration, preview and test evidence cannot reach reports or certificates.
6. Consequential actions go to an append-only trail.

Roles and scope

Each role answers a different question, and sees different work.

1. A learner sees what has been assigned to them.
2. An educator works on classes in their teaching context.
3. A head of department reviews, approves and locks material.
4. A school administrator publishes material and manages roles.
5. Leadership reads; it does not author or approve material.
6. A demonstration shifts the point of view, never adds authority.

> Visible account data, the selected context, and the authority to act are three different things.

The boundaries we acknowledge today

Stated so nothing here is mistaken for a promise.

1. The core is complete. Production readiness is not declared.
2. Load and stress validation is not finished.
3. Validation with real educators and learners is still ahead.
4. Parts of the management experience are still being developed; no management screen is shown today.
5. The accreditation framework, retention periods and the transfer policy remain open.
6. Some engineering questions remain, and are recorded.

> This presentation promises nothing beyond the list above.

Future direction — not part of what is presented today.

Everything here sits outside what has been built.

1. Psychometric calibration, once there is enough legitimate evidence.
2. Deeper question-health analysis.
3. A human-run integrity case workflow.
4. Paper-based assessment.
5. PINTAR Care — support and case handling.
6. Integrations, single sign-on, cross-institution content sharing.

> Nothing on this page carries a promised date.
