PINTAR 4.0 · Q10: the «not yet» state and the certificate's grade labels

6 October 2026. For Yazid and the Second Eye, who held Q10. **Analysis only; nothing is implemented.** The owner asked for:

- D-095(g), D-081 and Alternatives 1–3 in their original context;
- each alternative demonstrated at school pass marks of 60%, 70% and 80%;
- whether certificate eligibility (mastery) should be **separated** from qualitative performance labels, rather than redefining «Cukup» by each school's mark.

In one paragraph. The school's mark decides one thing: whether the learner passed, and so whether a certificate is issued (D-081, Dr Gladys's ruling). The grade label is a second, separate statement. The contradiction comes only from its lowest band, «Perlu Pendampingan» («needs assistance»), which can appear on a certificate whenever a school's mark is below 70%. Redefining «Cukup» by each school's mark (Alternative 1b, which I recommended on 30 Sep) removes the contradiction but turns the label into a second statement of «passed», and makes the same word mean different scores in different schools. **The separation the Second Eye asks about is the better answer** (Alternative 4 below):

- mastery stays the school's, binary;
- the label stays one fixed PINTAR scale, the same in every school;
- a certificate simply never carries a label that describes a need.

It is also the smallest change: one scoring-policy version without the lowest band.

1. The original context

The four scales PINTAR had on 30 Sep (semantic review, `design/PASS-MARK-AND-GRADE-SEMANTICS-REVIEW.md` §1). None of their numbers had ever been approved:

Scale	Values	Who sees it
The pass mark	0.60 everywhere, a code default	The learner («Target untuk bab ini»)
The certificate grade (predikat)	Sangat Baik ≥ 90% · Baik ≥ 80% · Cukup ≥ 70% · **Perlu Pendampingan below 70%**	**Only the certificate and the public verification page**, sealed in the signed record
The teacher's readiness tiers	below 60% · 60–79% · 80% and above («Siap sertifikasi»)	Teachers, deans, reports
The voice-guide words	Mantap · Berkembang · Perlu penguatan	Copy guidance

What happened since, in order:

- **D-078 (30 Sep), first:** «"Perlu Pendampingan" is not certificate-eligible», implemented «never [as] a certificate-specific threshold … two definitions of mastery must not quietly emerge».
- **The HOLD (30 Sep):** «Do not change the pass mark to 70%, and do not treat 60–69% as failure to reconcile them.» That HOLD produced the semantic review and its Alternatives 1–3.

- **D-081 (30 Sep, Dr Gladys's ruling, relayed by Yazid):** «PINTAR does not choose between a universal 60% and 70% pass mark … [a school] can configure the minimum passing mark for that lesson … without a second definition of passing». Follow-up: per school, per lesson, a whole-number percentage, 0–100, set by the school admin. «The chain: school policy → assignment snapshot → attempt snapshot → one pass determination → result, report, certificate.»
- **D-078 amended with D-081 (30 Sep):** «"Perlu Pendampingan" is a descriptive predikat and does not itself determine pass or fail or certificate eligibility. … The predikat stays a separate descriptive classification, and its bands are not changed as part of D-081.»
- **D-095 (3 Oct)** fixed the teacher's scale as «an independent instructional performance distribution … not the school's mastery or pass threshold». Its working words: ≥ 80% «Mantap», 60–79% «Berkembang», below 60% «Perlu penguatan», and «no Uji Penguasaan, a distinct not-yet state». **D-095(g)** kept two questions apart, which are Q10:
  1. «the missing no-final-test calculation (the not-yet band is never emitted, review F5 / T4)»;
  2. «the certificate grade labels (the predikat bands, semantic review Alternatives 1–3)».

What is built today (`main`, `20261102100000`): eligibility is the sealed school mark plus the safety gate and OFFICIAL evidence. That is D-081 exactly, one determination. The predikat is still the fixed 70 / 80 / 90 scale with «Perlu Pendampingan» below 70%. The not-yet state is declared in the metric catalogue and worded («Belum mengerjakan Uji Penguasaan»), but nothing produces it (review F5; D-095(g)).

Alternatives 1–3 as written on 30 Sep, when every mark was 60%, under the constraints «don't move 60% to 70%; don't call 60–69% failure; one definition of mastery; no certificate-specific threshold»:

	As written	Status after D-081
1a	Move «Cukup»'s floor from 70% to 60%	**Dead:** it only matched while every mark was 60%
1b	«Cukup» starts at *the assessment's own* pass mark; «Perlu Pendampingan» means «below the pass mark», so it never reaches a certificate. A new scoring-policy version for new sessions	Compatible with D-081
2	Keep 60% as a target; a certificate only from «Cukup» (70%)	**Ruled out by D-081 and D-078 as amended:** it is a certificate-specific threshold, a second definition of mastery
3	No grade on the certificate or the verification page	Compatible; it removes an element of the closed design (D-080)

Alternative 4, the separation the Second Eye asks about (new here):

- **Mastery:** binary, the school's sealed mark, unchanged. A certificate means «passed this school's standard».
- **The label:** one fixed PINTAR scale, the same in every school, describing the score only: Cukup ≥ 70%, Baik ≥ 80%, Sangat Baik ≥ 90%.
- **The change:** the scale **has no band below 70%**, so «Perlu Pendampingan» leaves the certificate vocabulary. A learner who passes a school's mark below 70% receives the certificate with no label line.
- **No contradiction remains:** a certificate is issued only for mastery, and a label that describes a need has no place on it.

2. Each alternative at school marks of 60%, 70% and 80%

A Uji Penguasaan, the safety gate passed, scores in whole per cent. «—» means no certificate. «(no label)» means a certificate with no grade line. ⚠ marks a contradiction or a rule broken.

School mark 60%:

Score	Passes?	Today (as built)	1b · Cukup from the mark	2 · certificate from 70%	3 · no grades	4 · separation
55%	no	—	—	—	—	—
60%	yes	certificate «Perlu Pendampingan» ⚠	«Cukup»	— ⚠ passed, no certificate	certificate	certificate (no label)
65%	yes	certificate «Perlu Pendampingan» ⚠	«Cukup»	— ⚠	certificate	certificate (no label)
70%	yes	«Cukup»	«Cukup»	«Cukup»	certificate	«Cukup»
75%	yes	«Cukup»	«Cukup»	«Cukup»	certificate	«Cukup»
80%	yes	«Baik»	«Baik»	«Baik»	certificate	«Baik»
95%	yes	«Sangat Baik»	«Sangat Baik»	«Sangat Baik»	certificate	«Sangat Baik»

School mark 70%: every alternative agrees except 3. Below 70% nobody passes, so «Perlu Pendampingan» never reaches a certificate even today.

Score	Passes?	Today	1b	2	3	4
65%	no	—	—	—	—	—
70%	yes	«Cukup»	«Cukup»	«Cukup»	certificate	«Cukup»
80%	yes	«Baik»	«Baik»	«Baik»	certificate	«Baik»
90%	yes	«Sangat Baik»	«Sangat Baik»	«Sangat Baik»	certificate	«Sangat Baik»

School mark 80%: every alternative agrees except 3. The lowest certificate reads «Baik», and «Cukup» never appears, because nobody below 80% passes.

Score	Passes?	Today	1b	2	3	4
75%	no	—	—	—	—	—
80%	yes	«Baik»	«Baik» (1b's Cukup band, 80–79%, is empty)	«Baik»	certificate	«Baik»
90%	yes	«Sangat Baik»	«Sangat Baik»	«Sangat Baik»	certificate	«Sangat Baik»

Where they differ: only when a school's mark is below 70%. D-081 allows any mark from 0 to 100, so that is a real case, not an edge one. At a 50% mark the same pattern runs from 50% to 69%:

- today: «Perlu Pendampingan» on a certificate;
- 1b: «Cukup»;
- 4: no label.

3. Separation versus redefining «Cukup»

Test	Today	1b	2	3	4
One mastery definition (D-081, D-086(b))	✓	✓ formally, but the label's lowest boundary *is* the pass mark, so the label repeats «passed»	✗ a second, certificate-only threshold	✓	✓
No self-contradicting certificate (D-078)	✗ below a 70% mark	✓	✓	✓	✓
Same label, same score, every school	✓	✗ «Cukup» is 50% at one school and 75% at another; two identical-looking certificates mean different things to a verifier	✓	—	✓
Passed → certificate (D-081)	✓	✓	✗ at marks below 70%	✓	✓
PINTAR's bands fixed, apart from the school's mark (D-095)	✓	✗ the certificate's bands move with each school	✓	—	✓
Closed design (D-080)	as is	as is	as is	✗ removes the grade element	the grade line is simply absent for a passer below 70% (DAISY-36 handles the empty slot)
Size of change	none	a scoring-policy version with bands relative to each mark, and a calculation per attempt	ruled out	the certificate, the verification page and the design	**a scoring-policy version that drops the lowest band**

Why 1b is weaker than it looked on 30 Sep. It was written when one 60% mark applied everywhere, and «Cukup from the mark» then simply meant «Cukup from 60%». Under D-081 it ties the label to each school's mark, so:

- the bottom of the label scale is a disguised «passed»;
- «Cukup» stops meaning a level of performance;
- a verifier reading two certificates cannot compare them.

The separation keeps each statement to one job:

- **the school says whether the learner mastered the lesson;**
- **PINTAR says how strong the score was, on one scale for everyone.**

One consequence to accept knowingly. Under 4, at a school whose mark is below 60%, a learner can hold a certificate while the teacher's D-095 band reads «Perlu penguatan» (below 60%). D-095 chose this on purpose: its bands are «not the school's mastery threshold and do not determine certificate eligibility», and the teacher's page says so («Pita tetap PINTAR … Bukan batas ketuntasan sekolah dan tidak menentukan sertifikat»). It is a teacher's instructional view, not a statement on the learner's certificate.

4. The «not yet» state (D-095(g), first half)

Canonical	D-095(c): «no Uji Penguasaan, a distinct not-yet state»
Today	Declared in the catalogue (`kesiapan.belum_post_test`) and worded («Belum mengerjakan Uji Penguasaan»), but never produced. A learner who has not taken the final test does not appear in that state (review F5)
Consequence	The teacher's distribution cannot show who has not yet been tested, which is the first thing a teacher acts on
Recommendation	**Build it:** a learner with no Uji Penguasaan result counts in the not-yet state, never in a performance band
Implementation	The readiness calculation emits the state (the next metric-catalogue version is published); a red-then-green test; GS-17 walked again

5. What you would rule

1. **The certificate's grade: Alternative 4 (recommended), 1b or 3.** Under 4:
   - a new scoring-policy version for new sessions, whose bands are Cukup ≥ 70%, Baik ≥ 80% and Sangat Baik ≥ 90%, with **no band below 70%**;
   - `engine_version` bumped (D-060);
   - issued certificates keep their sealed predikat (INV-30, D-076(e));
   - the certificate and verification page show the grade line only when there is one;
   - the learner's result page is unchanged.
2. **Whether the certificate should also print the school's mark** («Standar ketuntasan sekolah: 60%»). Not needed for coherence. It would reopen the frozen design (D-080), so it is a separate question for you and Daisy.
3. **The not-yet state: build it** (§4).

Nothing is built until you rule.
